PreXion3D Viewer: CBCT Quick Start for Dental Office Staff

1-page job aid · Sample training aid from a demo walkthrough · no real patient data

Audience: *Dental office staff opening a CBCT study in PreXion3D Viewer for the first time*

BEFORE YOU START

- ☐ **Have the study ready.** Unzip the ShareFile download first, or have the PreXion CD or USB backup on hand.
- ☐ **Know your scan type.** A wide scan covers more bone than dual arches and can show the condyles. Dual arches may cut off distal bone on teeth 1, 16, 17, and 32.

  Why wide: *most patients already have some pathology or occlusion issues, so a wider view helps the doctor see more.*

STEPS

1. **Launch the viewer.** Run it from the CD or USB. Nothing to install. Accept the terms popup.
2. **Pick the patient.** Click the patient name in the list. The study options appear at the bottom of the screen.
3. **Choose the right file.** Open the file with the larger number (500+). File 1 is the pano.
4. **Learn the views.** The top-left view is often transaxial. You will also see axial, coronal, sagittal, and 3D views.
5. **Go to the area of interest.** Navigate to the affected area. Measure with the piano-shaped icon next to the red X (exit). You can locate the inferior alveolar nerve here, but mapping is not available in the viewer.
6. **Take photos of your views.** The viewer does not save your work, including measurements, so capture what you need before you exit.

TRAINER TIPS

- **No install needed.** Runs from CD or USB, so it will not slow down the office PC.
- **Stuck unzipping a ShareFile download?** It is the most common snag. Call me and we will do it together.
- **Planning an implant?** Our team can prepare cross-sectional slices with bone measurements and the nerve mapped in orange, delivered to a free HIPAA-compliant cloud account, usually within an hour.

"It's a lot of information at first. No matter how many times you need it, I'm here to help, so call me. Focus on what you need. Don't worry about the rest; let me worry about it."
