PreXion / CBCT Viewer — Quick Start for Clinical Staff

1-page job aid · Sample training aid · no real patient data

Audience: *For dental office staff new to the 3D viewer*

BEFORE YOU START

- ☐ Confirm patient study loaded
- ☐ Verify correct patient
- ☐ Screen not visible to waiting room

STEPS

1. **Open study** — select the CBCT volume assigned to this patient.
2. **Orient views** — Axial / Sagittal / Coronal; reset to default if lost.
3. **Brightness/contrast** — adjust so bone and soft tissue are readable (avoid over-bright).
4. **Scroll / slice** — move through the volume to the region of interest (ROI).
5. **Measure (if trained)** — use ruler only for measurements you've been signed off on; document in chart per office protocol.
6. **Screenshots / export** — save only to the clinic's approved ShareFile/HIPAA path; never personal email or phone.
7. **Close properly** — exit viewer; do not leave PHI on screen.

GO-LIVE TIP

If stuck, call your trainer before inventing a workaround.
